

# SC SEARCH FEATURE DOES NOT SEARCH PROPERLY IN THE LIBRAIRIES

The "Search" feature within Scriptcase does not search properly in the librairies.

The screenshot displays the Scriptcase interface. At the top, the 'INTERNAL LIBRARIES' section is visible, listing files such as `jt_access_rights.php`, `jt_classes.php`, `jt_client.php`, `jt_messages.php`, `jt_sql.php`, and `sc_logged.php`. Two pink arrows point to the 'Project' dropdown menu and the library list. The main editor shows the content of `jt_messages.php`, which includes a `function SetMsg($pMsg)` and a `function bp_log_add($prm_title, $prm_content)`. The `sc_log_add` function call within `bp_log_add` is highlighted with a pink underline.

Below the editor, the 'APPLICATION SEARCH' section is shown. The search word is `sc_log_add`, and the search scope is set to 'Anything'. The search results are empty, with the text 'No matches found.' circled in pink.

No matches found.
